

THE DEVELOPMENT OF UKRAINE'S ECONOMY UNDER THE INFLUENCE OF GLOBAL TENDENCIES

O. M. Kirijenko, PhD in Economics, Ass. Prof., the State Institution of Higher Education «National Mining University»,

N. I. Kobzar, PhD in Economics, Ass. Prof., Prydniprovsk' State Academy of Construction and Architecture,

A. M. Andrejchykova, Assistant Lecturer, the State Institution of Higher Education «National Mining University», Andreychikova@mail.ru

Research methodology. The research results are obtained through the application of methods: the dialectical method in determining the nature and evolution of globalization processes as the major factor of development of the world economy; systematization and generalization in justifying an objective nature of globalization, the definition of the forms of its manifestation and factors influencing further development; statistical method in analysis the current state of the Ukrainian economy in the context of the global factors.

Results. Objective character and background of the world economy globalization processes are justified. The characteristics, driving forces and trends of globalization in the modern conditions are defined. Basic forms of globalization, namely the development of uniform rules of the game for all players in the global economy; formation of the common economic environment; application of new forms of governing the global economy; the emergence of new forms of political activity of individual states, etc. The views on the possible negative and positive consequences of globalization for countries of different levels of development are generalized and their ability to integrate and achieve desired degree of maturity for the processes of globalization is determined. The state of the Ukrainian economy development under the influence globalsonic processes is analyzes and the main problems connected with further international integration of national economy into the world community are identified.

Novelty. The problem of assessment of the globalization processes in modern conditions is analyzed, laws of their development are pointed out and the possible consequences for economic activity of different countries are anticipated.

Practical value. The results can contribute to a more objective assessment of the processes of national economies development under the influence of globalization and the development of practical measures to increase integration processes efficiency of Ukrainian economy into the world economy.

Keywords: internationalisation, globalisation, globalisation factors, world economy, international integration, economic development.
